

# Easy Innovations to Tune-up Your BMS

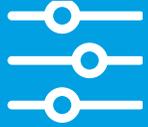

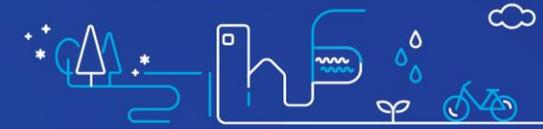

Ir Paul Chan  
Senior Smart Building Manager of Smart Energy Connect

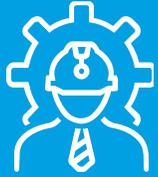

# Building Scope

# Problems With Modern Day BMS

BMS focuses on control

BMS is managed by engineers who need to focus on multiple goals: energy saving, fault detection and more

Facility managers need to deal with customer complaints

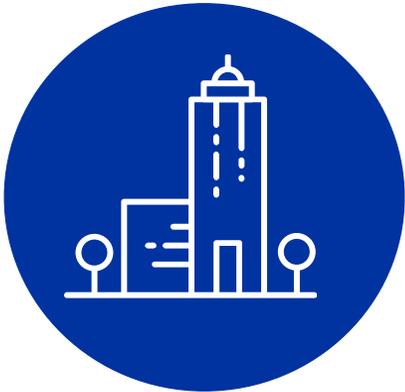

# Why Are These Problems Worth Solving?

## Value Proposition

### Smart Buildings

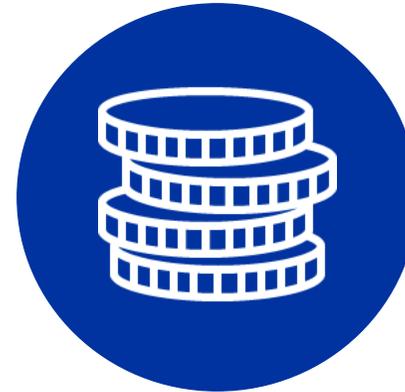

Improve commercial buildings and industrial facilities

### Being Greener

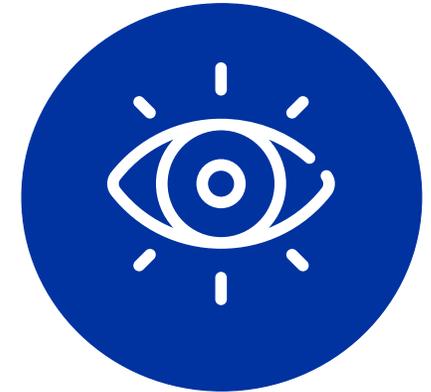

Supporting government targets helps alleviate resource shortages

### Cost Effective

Cut back on lost costs from inefficient energy management

### More Visibility

Gain more insight into data if BMS services are outsourced

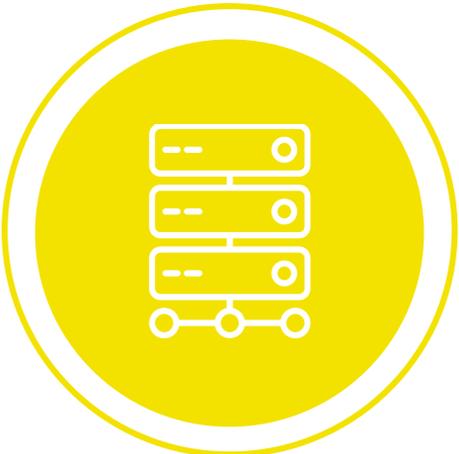

## Predictive Faults

Get early warning of faults through automated alerts and also get visibility of reoccurring faults

## Auto-tagging Data Points

Deploy and scale in days instead of weeks thanks to Building Scope’s machine learning and automated AI technology

## BMS Agnostic

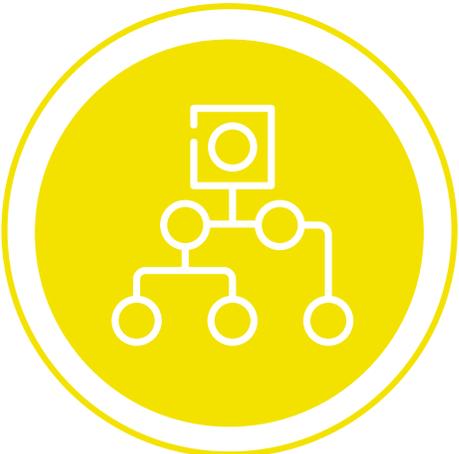

Analytics platform that sits on top of your existing BMS

SIEMENS

## Inbuilt Automated Work Order Management

Streamline operations by automatically monitoring and tracking issues through an integrated work order management system

## Reduce Complaints

Prevent complaints by having proactive information rather than always being reactive

## Automated Reporting

Dynamic KPI report chosen by client and fully automated

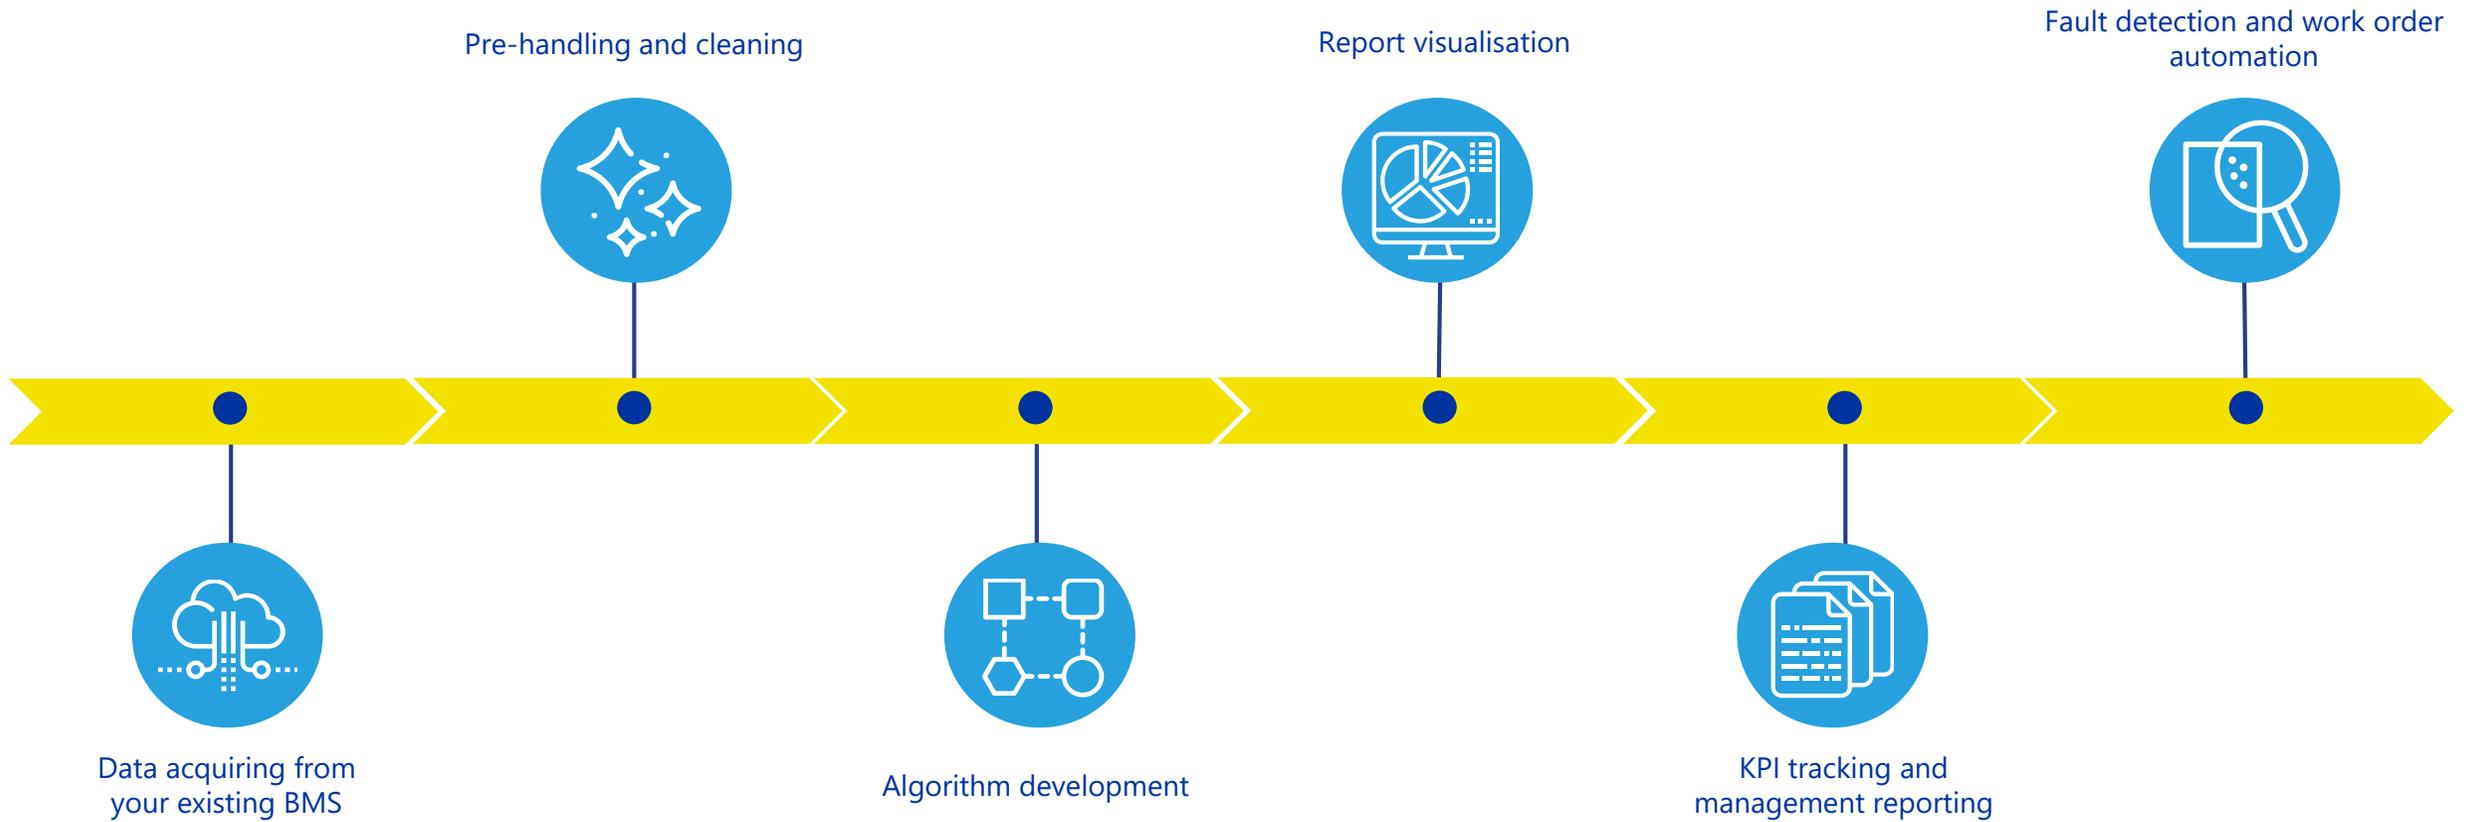

## 24/7 Monitoring

Virtual engineer that's monitoring your building health 24/7

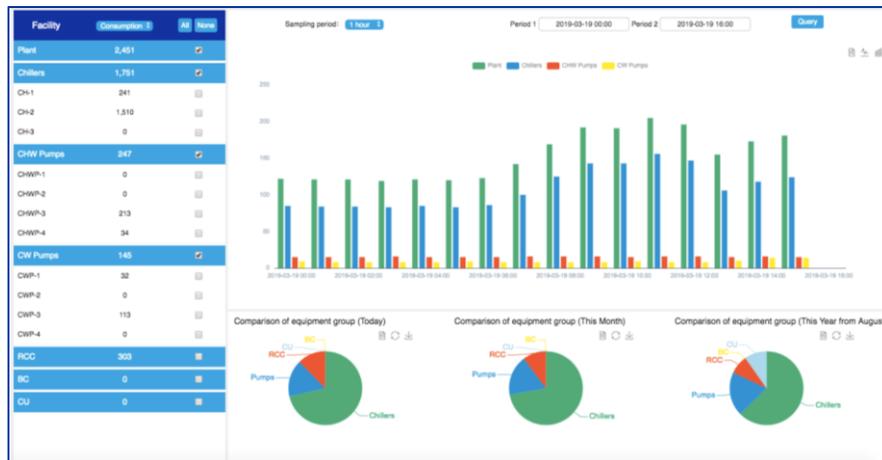

# How CLP Building Scope Works

# Building Scope Platform Overview (1/2)

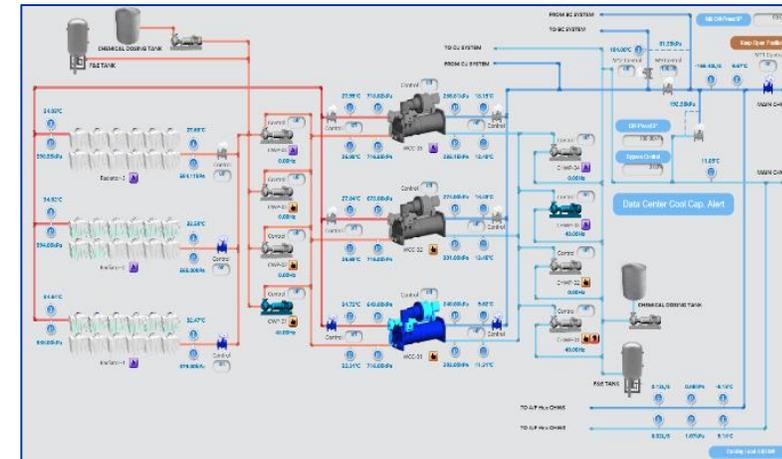

## Energy and Equipment Management

Building analytics solution that helps to save energy through energy optimization at building level

## Data and Device Visualisation

Energy savings can be achieved through identifying sub-optimal equipment. Access to all types of data without going onsite

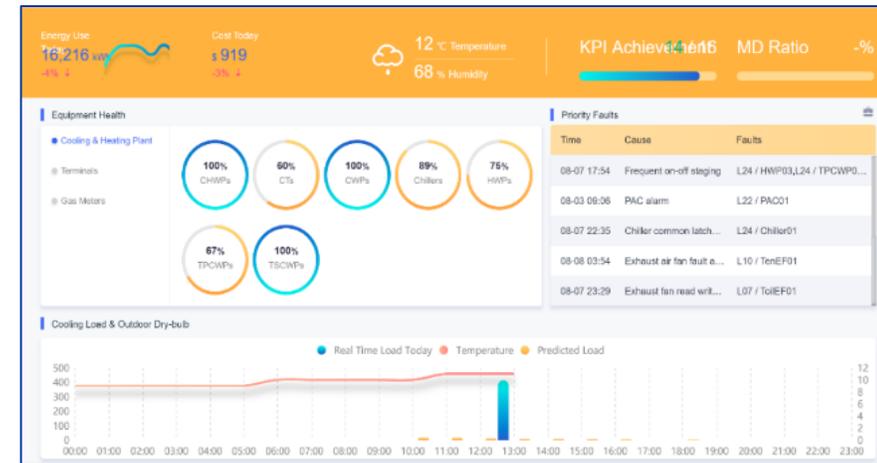

## Fault Detection and Diagnostics

Group detected faults into different categories, analyze energy waste and faults, and utilize ROI calculator

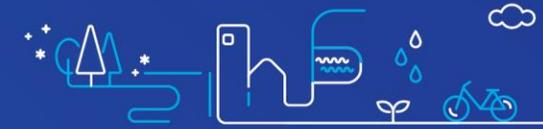

## Reduce Complaints and Prioritise Repairs

Through machine learning and predictive faults, facility managers can pre-empt failures and prevent occupant complaints

# Case Study – CLP Sham Shui Po Centre

~**1,600** Staff    **7** Floors    **Data Centre**

BMS

**Honeywell**    **2,600** Data Points

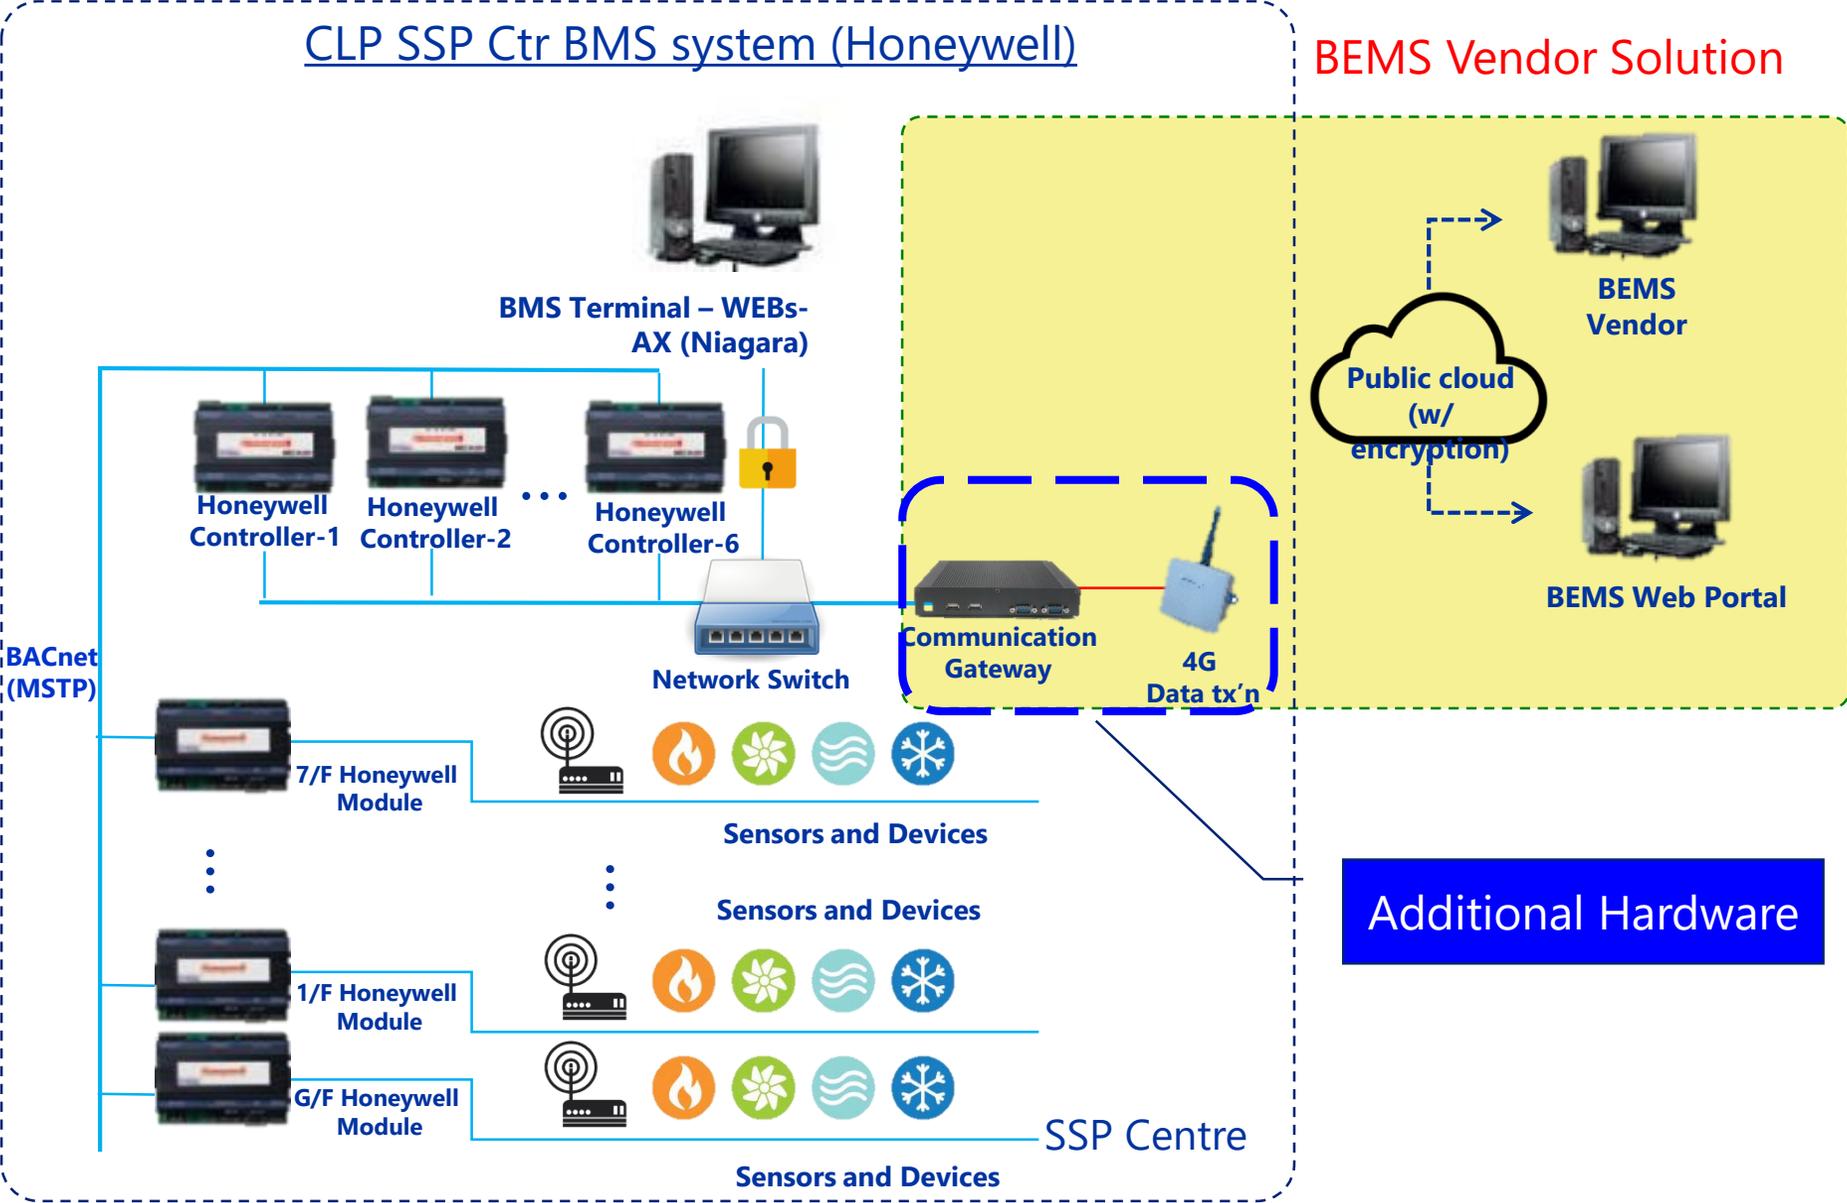

Results (12 months)

**7% +**  
Energy Saving

**67%**  
Reduction in Complaints

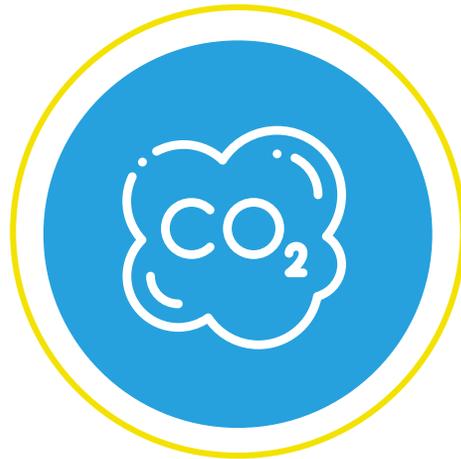

# BEMS Interface with Existing BMS

# Case Study – CLP Benefits

## Carbon Footprint Reduction

86 tCO<sub>2</sub>e avoided

Equivalent to 1,419 tree seedlings grown for 10 years

## Annual Saving (\$HK)

7% +  
(From Jan to Dec 2018)

Equivalent to fuel used by 12 average mid-sized gasoline cars in HK over 6 months

## Manpower Savings

Reduced 45 days of manpower hours required for fault investigation

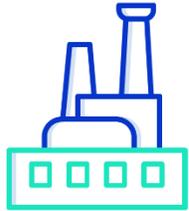

## Intangible Benefits

Promote sustainable image and reduce complaints from building users

# PlantPRO

## Inefficient Operation of HVAC Equipment

- 65% of HVAC energy consumption in buildings is consumed in the plant room alone

## Lack of Automation and Control

- The manual control of chillers or fixed chiller sequencing systems often results in energy wastage and additional cost

## System Downtime

- The unexpected breakdowns of chiller units can lead to costly and ad-hoc repair

## BMS Only Controls Specific Areas

- The lack of complete control over all functions and equipment does not allow for optimisation

# What Is PlantPRO?

## PlantPRO software is embedded on EDGE gateways hardware ready for on site integration

### Hardware

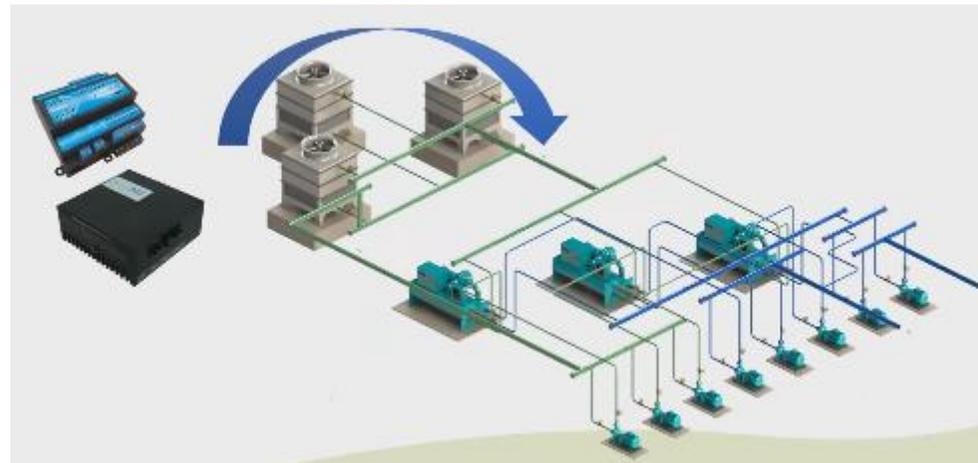

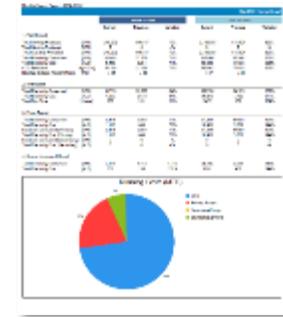

- 1 X PlantPRO controller is required per chiller system
- Can control up to 10 chillers in a single circuit

### Software

### Monthly Reports

**PlantPRO has the ability to control the following equipment**

**Chillers**

**Pumps**

**Cooling Towers**

**Valves**

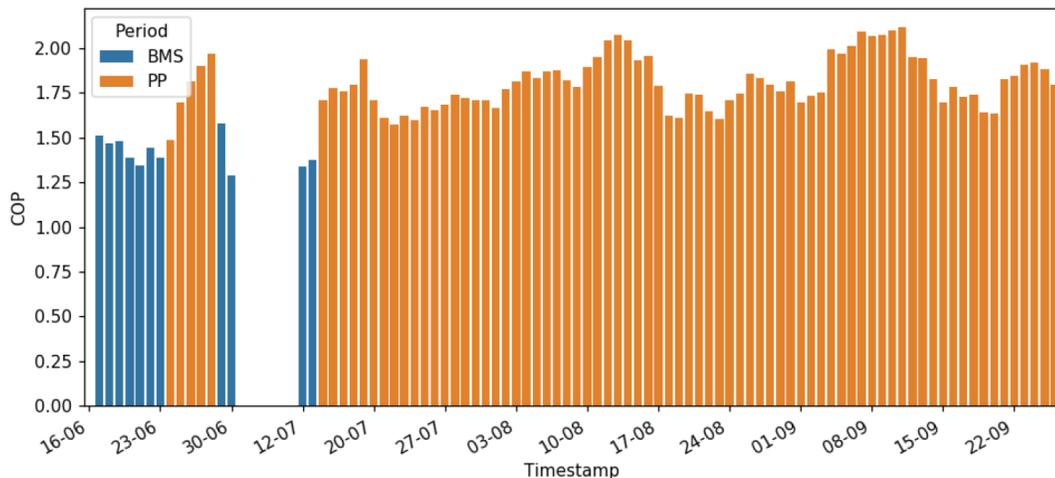

## Chillers

- Up to 10 units with the same circuit
- Water cooled, air cooled and district cooling
- Chiller brand agnostic

### Chiller Plant COP under PlantPRO control higher than the COP under BMS control

A daily trend of COP (for both BMS control and PlantPRO control) is shown below.

## PlantPRO Control & Optimisation

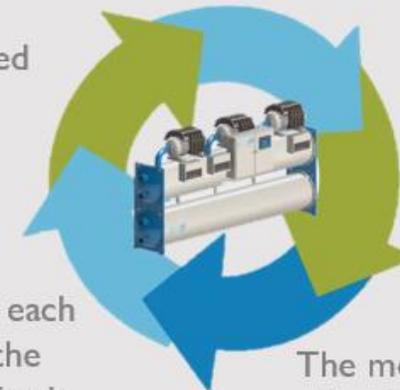

### Smart Sequencing

Future cooling load is calculated

The chosen chiller combination is applied

All chillers which can support the target cooling load are calculated

Power consumption of each chiller combination at the most desirable load point is calculated (including pump power)

The most optimum load point of each chiller which can satisfy the target cooling load is calculated

## Pumps

- Primary chilled water pumps
- Secondary chilled water pumps
- Condenser water pumps

Week Starting	Actual Power Consumption (kWh)	Predicted Power Consumption (from baseline) (kWh)	Weekly Energy Savings (kWh)	Energy Savings (%)
28/06/2020	28,858	37,699	8,841	23.5%
19/07/2020	30,004	38,429	8,425	21.9%
26/07/2020	41,462	54,957	13,495	24.6%
2/08/2020	40,867	52,834	11,967	22.7%
9/08/2020	35,649	46,617	10,968	23.5%
16/08/2020	34,585	50,560	15,975	31.6%
23/08/2020	34,097	48,051	13,954	29.0%
30/08/2020	32,604	43,730	11,126	25.4%
6/09/2020	37,382	50,153	12,771	25.5%
13/09/2020	33,139	45,151	12,012	26.6%
20/09/2020	36,180	45,561	9,381	20.6%
27/09/2020	31,383	37,869	6,486	17.1%

## PlantPRO Control & Optimisation

### Variable Primary Flow Control

#### Traditional System

Directly control pumps to the system differential pressure and rely on the bypass valve to ensure minimum flow through the chiller

- Can be difficult to tune to ensure stable operation at all times

#### PlantPRO

Control to design chiller flow and reset the design chilled water flow setpoint based on the trend of the field differential pressure

- Ensure chiller flow only varies between acceptable limits and there is no over reliance on the bypass valve to maintain sufficient flow level.

## Cooling Towers

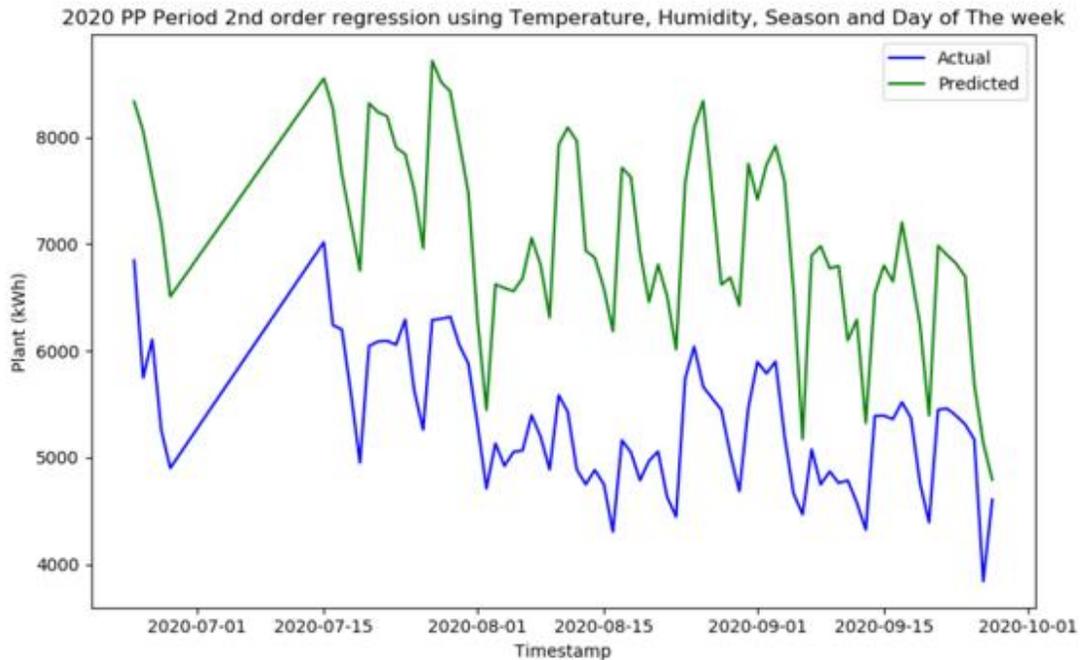

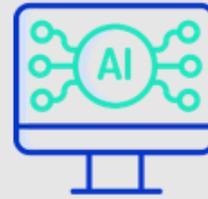

Figure 6 - Daily Energy Prediction VS Actual Daily Energy

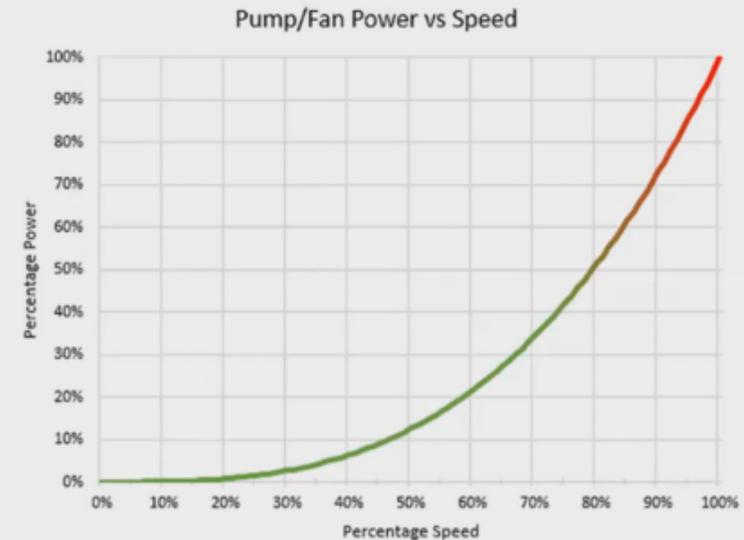

## PlantPRO Control & Optimisation

### Fan Efficiency and Fan Control

A small reduction in fan speed by PlantPRO results in a large energy saving

Example: A 10% fan speed reduction equates to a 30% reduction in power consumption

## Valves

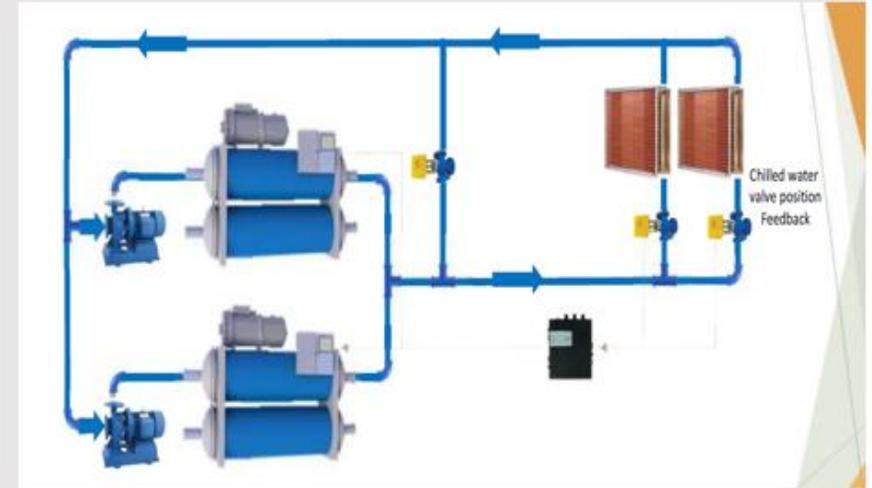

### PlantPRO Control & Optimisation

#### Chilled water valve open percentage

PlantPRO optimises the chilled water valve open percentage.

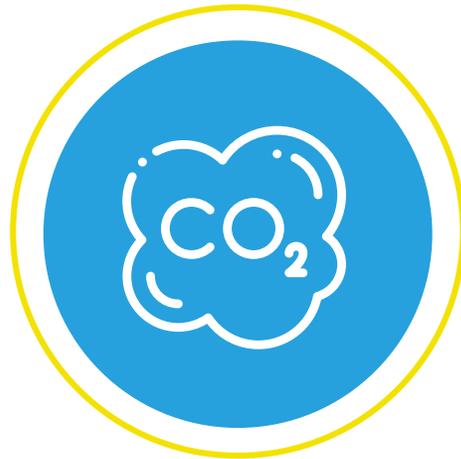

A low average chilled water valve open percentage indicates low field load, which raises the chilled water set point

# Case Study – CLP Benefits

## Carbon Footprint Reduction

253 tCO<sub>2</sub>e avoided

Equivalent to 4,175 tree seedlings grown for 10 years

## Annual Saving (\$HK)

8% +  
(From Jan to Dec 2020)

Equivalent to fuel used by 14 average mid-sized gasoline cars in HK over 6 months

## Manpower Savings

Reduced 44.5 manpower hours per month required for adjusting chiller water temperature, pump setting and radiator frequency

## Intangible Benefits

Promote sustainable image and reduce complaints from building users
